

Project: Chemical Trench

The Problem

This chemical trench at a WWTP was deteriorating after years of corrosion and erosion from the various chemicals used in this process area.

Management contracted RPT to repair and rebuild the trench.

The Solution

RPT pressure washed the trench and then hand tooled it down to bare concrete. The walls and floor of the trench were then rebuilt with **Thortex Floor-Tech RS** followed by 2 coats of **Thortex Chemi-Tech CR**.

Thortex Floor-Tech RS is a high-performance, solvent-free, epoxy resurfacing screed designed for use on concrete floors subject to abrasion and chemical attack.

Thortex Chemi-Tech CR is high-performance, solvent-free, epoxy coating that is specifically designed for environments where exceptional chemical and corrosion resistance are needed.
