

Project: Chemical Processing Facility

The Problem

This chemical processing facility needed a hard-wearing, chemical-resistant coating for its process floor.

They called RPT and Thortex.

The Solution

RPT and Thortex provided this company with a chemical-resistant system using **Thortex Chemi-Tech CR** over **Thortex Floor-Tech SP Primer**.

Thortex Floor-Tech SP Primer is a high-performance, low-viscosity, solvent-free coating designed for use as a multipurpose floor sealing and priming system.

Thortex Chemi-Tech CR is a high-performance, solvent-free, epoxy coating that is specifically designed for environments where exceptional chemical and corrosion resistance are needed.
