

Project: Process Plant Tanks

The Problem

This process plant needed to have their tanks coated.

RPT craftsmanship and Thortex quality are well known at this company. They have worked with them for years and were called in for this project as well.

The Solution

RPT pressure washed and hand tooled the tank, steel supports and handrails. This was followed by one coat of **Thortex Corro-Tech GP**.

We applied a final top coat of **Thortex Wall-Tech UV** in white for the tanks, blue for the steel supports and **Grip-Tech** yellow on the handrails.

Thortex Corro-Tech GP is a high-performance, anti-corrosive coating designed for use as a long-term protection system for new and existing steel structures where surface preparation is restricted.

Thortex Wall Tech UV is a high-performance, water-based coating with outstanding weather, chemical and abrasion resistance with excellent gloss, graffiti resistance and color stability.
